

Replacement Windows Come In Different Materials: Vinyl, Wood, and Aluminum

Replacement windows have evolved greatly over the years. Aluminum is still the standard, but vinyl replacement windows and fiberglass are becoming more common. Vinyl replacement windows are a great choice as they are very easy to maintain and will never require painting.

Aluminum replacement windows are still the most popular option when replacing your home's windows.

Aluminum replacement windows have been used for years in Florida, but Vinyl windows are rapidly replacing aluminum windows as the premiere choice.

Aluminum Windows

Aluminum windows have many of the qualities associated with steel windows, except you don't have to paint them, and they won't rust. Instead, aluminum windows are available with a number of anodized or baked-on finishes. The problem with aluminum windows, however, is that they aren't very energy-efficient. Aluminum is a good thermal conductor, so in cold weather heat drains out through the sash and frame, as moisture condenses on interior surfaces. Better quality aluminum windows are equipped with thermal breaks that separate the interior and exterior surfaces of the window.

Aluminum Windows Benefits

There are many benefits to installing aluminum windows in your home. Here we have listed some of the best qualities of aluminum replacement windows.

- Aluminum windows provide years of reliable operation.
- Aluminum is a very good conductor of heat, but poor insulator.
- Aluminum replacement windows are the strongest and most durable of all replacement window materials.
- Resists deterioration.
- Available in a multitude of colors.
- Enhances the appeal of your home.
- Aluminum windows can be painted unlike vinyl windows.

Vinyl Windows

It doesn't matter whether you need esthetic reasons, energy efficiency, costs, or ease of maintenance, vinyl windows are surely your best choice. Vinyl windows are famous for being inexpensive, durable, and very energy efficient. It's important to mention that vinyl windows are your great investment. You can be absolutely sure you make a correct decision choosing vinyl windows for your home as well as your budget.

What are vinyl windows? Vinyl windows are made from polyvinyl chloride (PVC), it's a product that has many benefits. The first to mention is that vinyl windows are almost maintenance free. The color goes through the whole material, so dings and scratches are almost impossible to see. The vinyl windows mean they never need attention as they never rot, corrode, warp, rust, or need painting. The vinyl combination greatly reduces heat, cold, and noise transfer while giving you year-round comfort and performance. Regardless the age your vinyl windows, will always look great!

What is more all vinyl windows are Highly Energy Efficient. These windows are strong and provide very good energy savings due to high R-values that means they are resistant to heat flow. There are many good reasons for installing vinyl windows in your home.

You can count on the following benefits from your vinyl windows:

- High Energy efficiency to save you money
- No need in Painting or Staining
- Extremely Durable and Long Lasting
- Economical
- Easily Customized
- Offered in a wide range of Styles
- Easy and Quick Installation

Wood

We don't have any manufactures that make windows that entirely made of wood for Florida. However, there are several manufactures that do have wood clad PVC. This means that the inside of the window looks like real wood but still has the strength and reliability of vinyl. You can have the look without the headaches of wood windows. Windsor offers a clad wood sash to the PVC frame that features real wood on the interior with a variety of painted colors on the exterior.
